

MULTIPLY THE MAGIC OF MIXED REALITY

Dreamoc Fusion is a unique feature that makes it possible to sync multiple Dreamoc displays, and create visual experiences like nothing else. Completely enchant your audience by making the 3D holographic content flow seamlessly across all your displays, adding a whole new dimension to your branded space. Fusion is already a built-in feature in most of our display solutions, and can be purchased as an add-on feature to the rest.

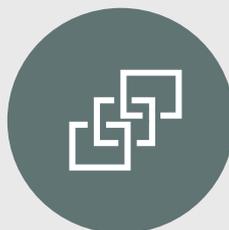

THINK INSIDE THE BOXES

When communicating your message with Dreamoc Fusion you open up to a new form of visual creativity. You can place your displays side by side in a shop window to increase foot traffic, or built-in as an integral part of your retail concept in store, to highlight special products or campaigns. You can even place them staggered or on top of each other at your event space or trade show booth, to generate attention and awareness. Your imagination and nature of communication are in fact the only limits you will encounter with Dreamoc Fusion.

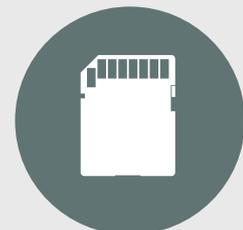

SETUP MADE SIMPLE

1. Upgrade firmware

2. Connect displays

3. Create config file

For resources and more information download the 'Dreamoc Fusion - Get Started' zip file [here](#), or download from the supportpage on our website, and follow the detailed instructions in the 'READ ME' pdf.
